

Never forget your company badge

COMPANY BADGES IN GOOGLE WALLET™

Your company badge is now available on Android devices. Google Wallet™ is a secure and private digital wallet on Android that gives you quick access to your company badge. Keep your company badge securely on your phone with Google Wallet and never print a credential again.

SET UP IS EASY

The Symmetry™ Wallet Platform allows for the secure provisioning of NFC based Google Wallet credentials and seamlessly integrates into AMAG Technology Symmetry Access software, controllers and reader technology allowing customers to add mobile credentials in addition to their physical cards.

The security team assigns company badges in Google Wallet using the Symmetry Wallet Platform. The user receives an email with a link to securely authenticate their identity and add the badge to their Google Wallet without downloading another mobile app. That's it and they are ready to go.

SEAMLESS USER EXPERIENCE

After you add your company badge to Google Wallet, you can access your buildings and spaces with your phone.

- No need to unlock your Android device to use your company badge in Google Wallet.
- Present your phone to the NFC-based Symmetry Blue reader to unlock the door.

SIMPLE MANAGEMENT

Easily create, deploy, and revoke badges across your organization to use with Symmetry Access Control,

saving the security team time and resources. Security administrators simply send a link. One-click and the company badge is deployed on an Android device and ready for use. When an employee leaves the business, delete them from Symmetry to revoke their company badge.

SAFE AND SECURE

Google Wallet keeps your company badge secure using the security features built into the Android device. MIFARE® 2GO technology provides protection mechanisms to prevent cloning or sharing of credentials, uses cryptography to secure authentication, encrypt communication, and prevent sniffing, relay attacks, and other forms of manipulation.

THE FUTURE OF ACCESS CONTROL IS HERE

Embrace the future of access control with company badges in Google Wallet. Save provisioning time, reduce waste by eliminating plastic cards, and experience safe and advanced technology to open doors. Using MIFARE 2GO allows users the ability to collaborate with hardware and software manufacturers, facilitating widespread adoption across global platforms.
